-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 21 August 2008.
- 2a) This action is **FINAL**.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 87 and 89-104 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 87 and 89-104 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Specification***

1. The amendment filed 8/21/08 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: In Applicant's replacement paragraph 58, the added material indicating the selecting of an instance and/or function of a requested service type on lines 3, 5, 6, and 10 is not supported by the original disclosure. The addition of new paragraph 82.1 also is not supported by the original disclosure. In Applicant's replacement paragraph 94, the added material indicating additional instances and/or functions of authentication service 414 and presence service 412 on line 3 is not supported by the original disclosure. In Applicant's replacement paragraph 108, the added material indicating an available instance and/or function of a conference logging service on line 6 is not supported by the original disclosure.

Applicant is required to cancel the new matter in the reply to this Office Action.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims **87 and 89-104** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject

matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claim **87**, on lines 16-18, there was no support found in the originally filed specification for the limitation “identifying and verifying a subset of services selected from the plurality of the services for the conference session and respective service endpoints associated with each of the subset of services in the communications network”. Therefore, it is held that this limitation constitutes new matter.

Further, on line 22, there was no support found in the originally filed specification for the limitation, “wherein the resources are a function of a conference logging service that is located via a presence service”. Therefore, it is held that this limitation constitutes new matter.

Regarding claims **89-94**, these claims are also rejected as being dependent on claim **87** and containing the same deficiency.

Regarding claim **95**, on line 11, there was no support found in the originally filed specification for the limitation, “wherein the resources are a function of a conference logging service that is located via the presence service”. Therefore, it is held that this limitation constitutes new matter.

Regarding claims **96 and 97**, these claims are also rejected as being dependent on claim **95** and containing the same deficiency.

Regarding claim **98**, on line 8, there was no support found in the originally filed specification for the limitation, “wherein the resources are a function of a conference

logging service that is located via a presence service". Therefore, it is held that this limitation constitutes new matter.

Regarding claims **99-104**, these claims are also rejected as being dependent on claim **98** and containing the same deficiency.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims **87 and 89-104** are rejected under 35 U.S.C. 103(a) as being unpatentable over Ludwig et al. (U.S. 6,237,025) (hereinafter "Ludwig") in view of Yoakum et al. (U.S. 7,139,797) (hereinafter "Yoakum") cited in Applicant's submitted IDS.

Regarding claim 87, *Ludwig* teaches the audio/video/data teleconferencing (feature service, conference service) provided among CMWs 12 by MLAN server 60 (service endpoint) of Figure 3 as spoken of on column 8, lines 43-58.

*Ludwig* also teaches the call negotiation process (authentication service) used for establishment of a multimedia call between endpoints logged in to an audio/video network manager as shown in Figure 23 and spoken of on column 21, line 65 - column 22, line 47.

*Ludwig* also teaches the setting up (enabling) of required audio/video and data paths between CMWs 12 (user endpoints) by MLAN server 60 (service endpoint) of Figure 3 as spoken of on column 8, line 66 – column 9, line 6.

*Ludwig* also teaches initiating CMW 12 signaling MLAN server 60 via Data LAN hub 25 identifying the desired conference participants as spoken of on column 8, line 67 – column 9, line 1.

*Ludwig* also teaches MLAN server 60 that determines which conferees (identifies user endpoints) will accept a conference call request as spoken of on column 9, lines 1-6.

*Ludwig* also teaches MLAN servers 60 (service endpoints) of the involved MLANs 10 that control their respective A/V switching circuitry 30, conference bridges 35, and WAN gateways 40 to set up appropriate communication paths (identify subset of services) as spoken of on column 9, lines 7-11.

*Ludwig* also teaches MLAN servers 60 (service endpoints) that communicate with one another via data paths so that each MLAN 10 contains updated information

(message routing mesh) as to the capabilities of the system CMWs 12 (user endpoints) as spoken of on column 9, lines 13-17.

*Ludwig* also teaches the respective MLAN servers 60 (service endpoints) of the involved MLANs 10 of Figures 1 and 4, that control their respective (distributed) A/V switching circuitry 30, conference bridges 35, and WAN gateways 40 (resources) to set up appropriate communication paths via WAN 15 in order to interconnect the conferees as spoken of on column 9, lines 7-12.

*Ludwig* also teaches the transmission of appropriate audio and video signals (messages) to/from each participant's CMW 12 as spoken of on column 19, lines 35-38.

*Ludwig* also teaches conference participants that initiate data conferencing services (newly selected service) with selected participant CMWs involved in a videoconference via MLAN server 60 (service endpoint) as spoken of on column 8, lines 20-22 as well as column 26, lines 47-63.

*Ludwig* does not explicitly teach providing "a presence service" and "a primary service" and "wherein the resources are an instance of a conference logging service that is located via a presence service, wherein the conference logging service publishes its presence with the presence service, wherein the presence service removes a pending presence entry of the conference logging service and replaces it with an actual presence entry".

However, *Yoakum* teaches a method of maintaining presence information of users participating in multimedia communication sessions, where a presence system 20 (presence service, primary service) accesses a database (logging service) that is used

to store a collection of communication capabilities (presence entries) for various communication devices participating in communication sessions as spoken of on column 5, lines 58-65. *Yoakum* further states on column 5, lines 58-65, how this database (logging service) may be updated (entry replacement) in any fashion and at any frequency.

At the time of the invention, it would have been obvious to someone of ordinary skill in the art, given these references, to combine the presence teachings of *Yoakum* with the teachings of *Ludwig* in order to provide a way to indicate the communication capabilities and availability of a user actively participating in a communication session to other users as spoken of on column 2, lines 30-42 of *Yoakum*.

Regarding claim 89, *Ludwig* further teaches the addition of one or more parties (temporary conference endpoint) to an existing two-party call as spoken of on column 24, lines 45-53.

Regarding claim 90, *Ludwig* further teaches the communication path establishment between CMWs at the same location (directly in same domain) spoken of on column 9, lines 1-6.

Regarding claim 91, *Ludwig* further teaches the communication path establishment between CMWs at distant locations via MLAN servers 60 (intermediate service endpoints) and WAN 15 of Figure 1 as spoken of on column 9, lines 7-12.

Regarding claim 92, *Ludwig* further teaches the use of software 160 (program) of Figure 20 to initiate and manage collaborative sessions with other users (additional users) as spoken of on column 18, lines 36-42.

Regarding claim 93, *Ludwig* further teaches the connection provided to a new invited participant CMW as spoken of on column 25, lines 23-32.

Regarding claim 94, *Ludwig* further teaches the optimal routing for audio/video signals (determining most suitable service endpoint) through the WAN as shown in Figure 4 and spoken of on column 10, lines 61-67.

Regarding claim 95, *Ludwig* teaches the collaboration system shown in Figure 1 that conducts multiple conference sessions among CMWs 12 of MLANs 10 as spoken of on column 5, line 63 – column 6, line 7.

*Ludwig* also teaches the CMWs 12 (endpoints) of MLANs 10 shown in Figure 1 as well as the multiple simultaneous conference session capability spoken of on column 37, lines 44-54.

*Ludwig* teaches the audio/video/data teleconferencing (feature service, conference service) provided among CMWs 12 by MLAN server 60 (service endpoint) of Figure 3 as spoken of on column 8, lines 43-58.

*Ludwig* also teaches the call negotiation process (authentication service) used for establishment of a multimedia call between endpoints logged in to an audio/video network manager as shown in Figure 23 and spoken of on column 21, line 65 - column 22, line 47.

*Ludwig* also teaches initiating CMW 12 (endpoint) signaling MLAN server 60 via Data LAN hub 25 identifying the desired conference participants as spoken of on column 8, line 67 – column 9, line 1, as well as MLAN servers 60 (service endpoints) that communicate with one another via data paths so that each MLAN 10 contains

updated information (message routing mesh) as to the capabilities of the system CMWs 12 (user endpoints) as spoken of on column 9, lines 13-17.

*Ludwig* also teaches the simultaneous conferencing involving a user roaming from one active conference session to another active conference session as spoken of on column 37, lines 32-54.

*Ludwig* does not explicitly teach providing “a presence service” and “a primary service” and “wherein the services are an instance of a conference logging service that is located via a presence service, wherein the conference logging service publishes its presence with the presence service, wherein the presence service removes a pending presence entry of the conference logging service and replaces it with an actual presence entry”.

However, *Yoakum* teaches a method of maintaining presence information of users participating in multimedia communication sessions, where a presence system 20 (presence service, primary service) accesses a database (logging service) that is used to store a collection of communication capabilities (presence entries) for various communication devices participating in communication sessions as spoken of on column 5, lines 58-65. *Yoakum* further states on column 5, lines 58-65, how this database (logging service) may be updated (entry replacement) in any fashion and at any frequency.

At the time of the invention, it would have been obvious to someone of ordinary skill in the art, given these references, to combine the presence teachings of *Yoakum* with the teachings of *Ludwig* in order to provide a way to indicate the communication

capabilities and availability of a user actively participating in a communication session to other users as spoken of on column 2, lines 30-42 of *Yoakum*.

Regarding claim 96, *Ludwig* further teaches the audio, video, text, graphics, and mail capabilities provided in the collaboration system of Figure 1 as spoken of on column 8, lines 41-49.

Regarding claim 97, *Ludwig* further teaches the tracking of party location spoken of on column 9, lines 13-17.

Regarding claim 98, *Ludwig* teaches the collaboration system shown in Figure 1 that conducts multiple conference sessions among CMWs 12 of MLANs 10 as spoken of on column 5, line 63 – column 6, line 7.

*Ludwig* also teaches the CMWs 12 (endpoints) of MLANs 10 shown in Figure 1.

*Ludwig* teaches the audio/video/data teleconferencing (feature service, conference service) provided among CMWs 12 by MLAN server 60 (service endpoint) of Figure 3 as spoken of on column 8, lines 43-58.

*Ludwig* also teaches the call negotiation process (authentication service) used for establishment of a multimedia call between endpoints logged in to an audio/video network manager as shown in Figure 23 and spoken of on column 21, line 65 - column 22, line 47.

*Ludwig* also teaches the adding or removing of participants from a session as spoken of on column 21, lines 55-64.

*Ludwig* also teaches the additional collaborative services such as mail, application sharing, etc. available for CMWs of a session as spoken of on column 19, lines 47-54.

*Ludwig* does not explicitly teach “a presence service” and “a primary service” and “wherein the services are an instance of a conference logging service that is located via a presence service, wherein the conference logging service publishes its presence with the presence service, wherein the presence service removes a pending presence entry of the conference logging service and replaces it with an actual presence entry”.

However, *Yoakum* teaches a method of maintaining presence information of users participating in multimedia communication sessions, where a presence system 20 (presence service) accesses a database (logging service) that is used to store a collection of communication capabilities (presence entries) for various communication devices participating in communication sessions as spoken of on column 5, lines 58-65. *Yoakum* further states on column 5, lines 58-65, how this database (logging service) may be updated (entry replacement) in any fashion and at any frequency.

At the time of the invention, it would have been obvious to someone of ordinary skill in the art, given these references, to combine the presence teachings of *Yoakum* with the teachings of *Ludwig* in order to provide a way to indicate the communication capabilities and availability of a user actively participating in a communication session to other users as spoken of on column 2, lines 30-42 of *Yoakum*.

Regarding claim **99**, *Ludwig* further teaches the additional collaborative services such as mail, application sharing, etc. available for CMWs of a session as spoken of on column 19, lines 47-54.

Regarding claim **100**, *Ludwig* further teaches the use of software 160 (program) of Figure 20 to initiate and manage collaborative sessions with other users (additional users) as spoken of on column 18, lines 36-42.

Regarding claim **101**, *Ludwig* further teaches the selection of appropriate audio and video signals to be transmitted to/from each participant's CMW as spoken of on column 19, lines 29-37.

Regarding claim **102**, *Ludwig* further teaches the database access services spoken of on column 8, line 47-49.

Regarding claim **103**, *Ludwig* further teaches the audio file access service spoken of on column 8, lines 47-49.

Regarding claim **104**, *Ludwig* further teaches the video file access service spoken of on column 8, lines 47-49.

### ***Response to Arguments***

7. Applicant's arguments filed 8/21/08 have been fully considered but they are not persuasive.

Regarding the rejections of claims **87-104** under 35 U.S.C. 112, 2<sup>nd</sup> paragraph provided in the previous Office Action, these particular rejections have been withdrawn due to the current amendments made in Applicant's present response. However, new

rejections under 35 U.S.C. 112, 1<sup>st</sup> paragraph have been made as provided above as a result of the current amendments made in Applicant's present response.

Regarding the prior art rejections of record of claims **87 and 89-104** provided in the previous Office Action, Applicant asserts that Examiner has not provided findings of fact regarding the state of the art and teachings of *Ludwig* in relation to Applicant's claims. Applicant further asserts that the invention of *Ludwig* was designed eleven years ago and that while *Ludwig* may have had some foresight, the invention, as developed by Applicant has many features that are neither present nor contemplated in *Ludwig*.

8. In response to applicant's argument based upon the age of the references, contentions that the reference patents are old are not impressive absent a showing that the art tried and failed to solve the same problem notwithstanding its presumed knowledge of the references. See *In re Wright*, 569 F.2d 1124, 193 USPQ 332 (CCPA 1977).

9. Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

Further, it is held that the Examiner has provided a fairly detailed explanation of particular teachings of *Ludwig* and *Yoakum*, and how these teachings apply to the limitations of Applicant's claims in the previous Office Action as well as above. Further,

the added limitations to claims **87 and 89-104** provided in this response are also believed to be taught by *Ludwig*, and these grounds are provided above.

***Conclusion***

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL J. MOORE, JR., whose telephone number is (571)272-3168. The examiner can normally be reached on Monday-Friday (7:30am - 4:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jayanti K. Patel can be reached at (571) 272-2988. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
